

POWER-ALL®

POWER-ALL SYSTEM OPERATION INSTRUCTIONS

1. Remove the PA-9 and accessories from the packaging and check to make sure all listed components of the kit are present. If any items are missing, please contact us at service@godlyke.com to arrange for a replacement.
2. Plug the PA-9 power adaptor directly into a wall-mounted power outlet. Plugging into an external power strip along with other electronic devices can cause ground loops that will generate unwanted hum and should be avoided if at all possible. If you **MUST** plug into an external power strip, make sure that your amplifier is plugged into a separate power strip and/or wall outlet to avoid ground loops which will cause hum.
3. Arrange the effect units that you plan to power in the order that you wish to chain them together.

PLEASE NOTE THE FOLLOWING POWER RESTRICTIONS

- The PA-9 provides 9 volts DC power ONLY. Any effect units that have a different voltage requirement cannot be powered by the PA-9. Some of these units may be able to be powered by the Iso-Pump voltage converter (sold separately) - Please contact us at info@godlyke.com for more information.
 - All effect units to be powered should have the same ground configuration to chassis. Effects with different ground configurations cannot be powered off the same PA-9 unit without using the Ground Hound ground isolator unit (sold separately). Please contact us at info@godlyke.com for more information.
 - Make sure you check the polarity on all the units that you are planning to power **BEFORE** you connect them to the PA-9. Any damage caused due to improper connections is the sole responsibility of the user and is not covered by our manufacturer's warranty.
4. Connect the Cable-11 daisy chain to the effects that you wish to power, and **THEN** connect the Cable-11 to the PA-9. You may continue to connect multiple daisy chain cables to one another in order to power additional effect units until the maximum current capacity (2000 mA) of the Power-All is reached.
 5. When hooking up your various effect units, you may need to use some of the colored Jumper Cables included with the kit in order to make the proper connections –

- Cable-Black – Tip negative 2.1 mm barrel extension jumper for long cable runs
- Cable-Blue – 3.5 mm tip positive phone plug jumper for connection to EH, ProCo Rat, older DOD and other vintage effects
- Cable-Grey – Battery Clip cable for connection to vintage effects with no AC jack
- Cable-Green – 2.5 mm internal diameter, tip positive barrel connector for use with Line 6 Modelers, larger EH and other digital effects
- Cable-Red – Tip positive 2.1 mm barrel connector for reverse polarity effects
(Note that all units powered must have same ground configuration)

As with the Daisy-Chain cable, make sure to connect the colored jumper cables to your effect units before connecting the cables to the Daisy-Chain or Power-All.

6. If you are using less than 11 effect units, please cover the unused power jacks on the Daisy Chain with the enclosed yellow cable caps to prevent short circuit connections.
7. Make all necessary audio connections, power up and play.
8. If the PA-9 does not power up your effect chain properly, please unplug the unit from the power source, wait 60 seconds, then reconnect it to the power source. If the PA-9 still does not function properly, please contact us at service@godlyke.com for help in troubleshooting the problem.

If you have any additional questions or problems, please contact us at service@godlyke.com for help with troubleshooting your signal chain.

LIFETIME WARRANTY

Godlyke, Inc. guarantees to replace or repair (at their option) this product should it suffer from defects in materials and/or workmanship during the life of the product.

Damages caused by accident, abuse, alteration, or misuse are not covered by this warranty. Product appearance and normal wear and tear (worn cables, scratches, etc.) are not covered under this warranty.
